DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Masek et al.

There is disclosed in Masek a beverage producing cartridge and method of constructing, including: the production of a plurality of outer members 8, 17, 25 each having a differing shape and configurations; the production of a plurality of inner members 13, 23, 30 each having a differing shape and configuration; the selection of and conjoining, by welding, of one of the plurality of outer members with one of the plurality of inner members; each outer member being filled with a beverage ingredient; and each outer member being sealed with a lid 12, 21, 29 to form a finished cartridge.

In regards to the plurality of inner members being interchangeable, it should be noted at column 3, lines 42-44, 51 and 52, that the members are stated as being interchangeable and mountable in either of the plurality of outer members.

In regards to the storing of the outer members and inner members, such is not definitive of a manufacturing step and is therefor not given patentable weight.

Art Unit: 3742

Additionally, it is inherently taught that the outer and inner members are stored, at least for some period of time, before they are assembled together.

In regards to claim 2, the inner members are taught in Masek as having a filtering function.

In regards to the type of beverage ingredient which is contained and filtered by the outer and inner members, such is not definitive of a manufacturing step. But, it is clear from Masek that soluble ingredient is appropriate.

In regards to claim 6 and the entraining of air bubbles in the beverage by the second type of inner member, there is recited in the claim no means for performing this function. It is known in the art that a certain amount of air bubbles will be formed in the filtering of a beverage which is done by forcing hot water through a beverage ingredient and then through a filter element.

Allowable Subject Matter

Claims 7-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 27 is allowed.
